SUMMARY

Product designer with 4+ years taking products from brief to live release across fintech, B2B SaaS, consumer apps and education. I design the system, then build it: from Figma to production with Claude Code, Lovable and Supabase, without waiting on a separate engineering team. Results include an 18% conversion lift at DealMate and a 40% cut in developer handoff time from the Jomppa design system.

EXPERIENCE

Founder & Principal Product Designer, MoCreative Concept

Lagos · Remote · Jan 2021 – Present

Independent product design and AI automation practice. Client work and own products:

- **Next Level Procurement (UK, B2B procurement):** sole designer and developer since 2021. Led the rebrand from Shopall Superstore & Logistics (identity, visual direction, positioning), then designed and shipped the new website with Lovable, Claude Code and Vercel. Now designing a procurement management system for suppliers, workflows and reporting.
- **DealMate (fintech escrow):** redesigned the peer-to-peer transaction flow around clear trust signals at the moments users worry most. Conversion up 18%, support tickets down 30%.
- **Topkids Montessori School:** designed a student and payment management system in Notion that replaced manual records (admin errors down an estimated 35%), and mapped the admissions workflow, fixing 8+ bottlenecks.
- **Agentic operating system (own product):** 15 live AI agents (34 planned) on Claude, Supabase and Resend, running the lead pipeline, proposals, invoicing and spend control, with human approval before anything is sent.
- **Job search agent (own product):** scans remote roles weekly, checks each one is live, scores fit and drafts applications, but never applies on its own. Every drafted answer is tagged verified or claimed.

Product Designer, LeapTra

Remote · Sep 2025 – Present

AI agents and SaaS for business automation.

- Designed AI agents for sales, marketing, onboarding, operations and support, lifting business efficiency by 40%.
- Designed an email organiser and lead-qualifier agent that scores and routes prospects into the CRM: response time down 52%, lead conversion up 28%.
- Designed admin dashboards and real-time monitoring that improved internal reporting efficiency by 35%.
- **Jomppa (cross-border errand PWA, from Oct 2025):** led end-to-end product design. Built the Figma design system (components, auto-layout, variants, tokens) across 50+ screens, cutting developer handoff time by 40%. Shipped as a PWA to remove app-store friction for diaspora users: load time down 45%, onboarding time down 25%, engagement up 40%.

Product Design Intern, Young Titans Foundation

Remote · Jul 2025 – Oct 2025

- Designed the foundation's website and landing page (WCAG 2.1 AA), increasing user engagement by 52%.
- Ran 50+ one-to-one interviews with teachers and parents, turned the findings into roadmap priorities, and led a team of 2–3 designers to deliver the site.

SKILLS

Product design: 0→1 product design, UX research, usability testing, interaction design, information architecture, wireframing, prototyping, dashboard and admin design, accessibility (WCAG 2.1 AA)

Systems and brand: Design systems, Figma (components, auto-layout, variants, variables, tokens), visual identity, Framer

AI-native build: Claude Code, Cursor, Lovable, Figma Make, Trae AI, AI agent design, Supabase, Vercel, Git, Webflow, Notion

Domains: Fintech, B2B SaaS, consumer apps, EdTech, job search and HR tech
